差异说明

Explanation of Differences

1. 背景：在沿用心理健康大背景上，大量增补 2025–2026 政策与行业叙述（如社会心理服务体系建设试点验收、儿少与精卫「服务年」、艺术疗愈蓝皮书筹委会等——以你文中实际表述为准），并单独写 市场机会、核心优势、用户画像、竞品格局。

Background: Building on the overarching context of mental health, extensively supplement policies and industry narratives from 2025 to 2026 (such as the acceptance of pilot projects for the construction of the social psychological service system, the Service Year for Children, Adolescents and Mental Health, the Preparatory Committee for the Art Therapy Blue Paper, etc.—subject to the actual expression in your text), and separately elaborate on market opportunities, core strengths, user profiles, and competitive landscape.

2. 需求场景：明确 C 端日常 + B 端高校心理中心/企业 EAP/社区；产品链路写成「识别—生成—干预—评估」与 疗效反馈—迭代；并写 低门槛、非病理化、文化认同、隐私友好 等用户洞察。

Demand scenario: Clarify C-end daily scenarios plus B-end university psychological centers, corporate EAP programs, and communities. Structure the product workflow as "Identification—Generation—Intervention—Evaluation", along with efficacy feedback and iteration. Also incorporate user insights such as low barrier to entry, non-pathologization, cultural identity, and privacy-friendliness.

3. 商业：C 端基础免费 + 增值服务；B 端机构合作；中期数据分析、后期「AI 辅助艺术疗愈师」培训等 创业路径；与大赛「创业点」表述一致。

Business: Basic free services for C-end users plus value-added services; institutional cooperation for B-end users; entrepreneurial paths including mid-term data analysis and later training for "AI-assisted art therapists"; consistent with the description of "entrepreneurial points" in the competition.

4. 品牌与叙事升级：从单一科研项目名 「墨韵心调」 升级为赛事品牌 「墨心智愈」，并把新版写成 原项目的系统化升级，方便延续故事又符合三创话术。

Brand and Narrative Upgrade: Upgraded from the single scientific research project name "Moyun Xintiao" to the competition brand "Moxin Zhiyu", and positioned the new version as a systematic upgrade of the original project, facilitating story continuation while aligning with the rhetoric of the Three-Creation Competition.

5. **技术的重要改动** 原版视觉主线：通义万相本地部署 + 后续微调设想。新版视觉主线：强调以 Stable Diffusion XL（SDXL）+ LoRA + 自建国画情感数据 + 条件扩散与提示词工程 为主，自主知识产权与领域适配；工程上写 Stable Diffusion WebUI 的 txt2img API、可与 通义万相等云端做混合部署——即从「以通义万相为中心」调整为 「开源 SDXL 自训为主、商用云为扩展」 的路线叙述。

工程落地写得更实：Streamlit、run_pipeline、emotion_to_prompt.csv、火山引擎 BGM、豆包对话/TTS、payload 归档与 smoke 日志 等，和实际仓库更接近。

Major technical revisions:Original visual main line: Local deployment of Tongyi Wanxiang + follow-up fine-tuning ideas.New visual main line: Emphasis on Stable Diffusion XL (SDXL) + LoRA + self-built traditional Chinese painting emotion dataset + conditional diffusion

and prompt engineering as the core, with independent intellectual property rights and domain adaptation; in terms of engineering, develop the txt2img API for Stable Diffusion WebUI, which supports hybrid deployment with cloud services such as Tongyi Wanxiang — that is, the narrative route is adjusted from "centered on Tongyi Wanxiang" to "open-source SDXL self-training as the core and commercial cloud as an extension".

More practical engineering implementation details: Streamlit, run_pipeline, emotion_to_prompt.csv, Volcano Engine BGM, Doubao chat/TTS, payload archiving and smoke logs, etc., which are more consistent with the actual repository.
